Incremental Deployment of a Signed Root

RIPE 59 DNS WG, Lisbon, Portugal
8 October 2009

Joe Abley, ICANN      Matt Larson, VeriSign
Goals
Goals

- Deploy a signed root zone
  - Transparent processes
  - Audited procedures
  - Trust
  - DNSSEC deployment
- validators, registries, registrars, name server operators
Issues
DO=1

- A significant proportion of DNS clients send queries with EDNS0 and DO=1
- Some (largely unquantified, but potentially significant) population of such clients are unable to receive large responses
- Serving signed responses might break those clients
Rollback

• If we sign the root, there will be some early validator deployment

• There is the potential for some clients to break, perhaps badly enough that we need to un-sign the root (e.g., see previous slide)

• Un-signing the root will break the DNS for validators
Proposal
Deploy Incrementally

• Serve a signed zone from just L-Root, initially
• Follow up with J-Root
• Then other root servers >A
• Last, A-Root
Deploy Incrementally

• The goal is to leave the client population with some root servers not offering large responses until the impact of those large responses is better understood

• Relies upon resolvers not always choosing a single server
  ▸ Note we propose leaving A until last
DURZ

- “Deliberately Unvalidatable Root Zone”
- Sign RRSets with keys that are not published in the zone
- Publish keys in the zone which are not used, and which additionally contain advice for operators (see next slide)
- Swap in actual signing keys (which enables validation) at the end of the deployment process

Key ID = 6477
DURZ

• Deploy conservatively
  ‣ It is the root zone, after all

• Prevent a community of validators from forming
  ‣ This allows us to un-sign the root zone during the deployment phase if we have to without collateral damage
Measurement

- For those root servers that are instrumented, full packet captures and subsequent analysis around signing events
- Ongoing dialogue with operator communities to assess real-world impact of changes
Testing

- A prerequisite for this proposal is a captive test of the deployment
  - Test widely-deployed resolvers, with validation enabled and disabled, against the DURZ
  - Test with clients behind broken networks that drop large responses
Thoughts?

- Feedback on this proposal would be extremely welcome
  - Queue at the mic
  - Email Matt and Joe
